EDUCATION

JK Lakshmipat University

B.Tech in Computer Science, **CGPA: 7.9** — 75% Merit Scholarship

Jaipur, India

Aug 2023 – Present

EXPERIENCE

Veloce AI

AI Engineering Intern

Aug 2026 – Present

Remote/Pune, India

- Building **Reprompt**, a self-evolving prompt optimizer that migrates multi-stage LLM pipelines to cheaper models via iterative critique-refine loops and three-signal composite scoring
- Designed a **DAG-based Pipeline to Stage data model** (SQLAlchemy 2.0) with versioned Migration/Candidate tracking for reproducible optimization runs
- Shipped a **full-stack migration platform** (FastAPI + React with TypeScript) with DAG-based pipeline visualization, BYOK multi-model support, and 600+ automated tests

EY (Ernst & Young)

AI Engineering Intern — Tax Technology

June 2026 – Aug 2026

Gurugram, India

- Built an **LLM cost-optimization framework** for Taxmann.AI, a RAG tax-research product running a three-stage chain
- Engineered a **multi-model evaluation harness** (FastAPI + LiteLLM) routing across Gemini, Groq, OpenRouter, and NVIDIA NIM, with DSPy GEPA optimization and LLMingua-2 context compression
- Designed a **three-tier evaluation pipeline** — embedding similarity, cross-encoder reranking, and LLM-as-judge — validated against **25 production query traces**

LNMIIT Jaipur

Research Intern

May 2025 – Jul 2025

Jaipur, India

- Built a **YOLOv5-based object detection pipeline** on FLIR RGB-Thermal datasets for low-visibility environments, improving detection accuracy over single-modality baselines
- Automated preprocessing and annotation alignment in PyTorch, reducing dataset preparation time by **60%**
- Designed an **RGB-thermal fusion model** for real-time multimodal inference in surveillance and autonomous driving applications

PROJECTS

MeetCut — AI Meeting Intelligence Platform | React, Node.js, MongoDB, OpenAI, Groq Jan 2026 – Apr 2026

- Built a platform converting meeting recordings into summaries, action items, and FAQs using OpenAI Whisper and Groq Llama 3.3-70B with **95% processing accuracy**
- Architected the **full-stack system** (React, Node.js, MongoDB Atlas) with Recall.ai integration for Zoom/Meet/Teams, JWT auth, HMAC webhook security, and automated PDF/email delivery

Blockchain Land Registry (Web3 DApp) | Solidity, Hardhat, React, ethers.js, IPFS, Polygon Mar 2026 – Apr 2026

- Engineered a decentralized land registry with **6 modular smart contracts** and role-based access control for registration, ownership transfer, and dispute handling
- Built an atomic buy-sell mechanism with ReentrancyGuard protection and IPFS storage, achieving **100% coverage across 70+ Hardhat test cases**

Emergency Route Finder | Flask, Folium, Graph Algorithms

Feb 2025 – Mar 2025

- Developed a Flask-based emergency routing system using Dijkstra's Algorithm and Kruskal's MST to identify optimal ambulance routes and nearby hospitals, visualized via interactive Folium maps

TECHNICAL SKILLS

Languages: C++, Python, C, JavaScript, Solidity

Frameworks & Libraries: React.js, Node.js, FastAPI, Flask, PyTorch, Scikit-learn, Pandas, NumPy

AI/ML Tooling: LiteLLM, Langfuse, RAG pipelines, LLM evaluation

Databases & Tools: MongoDB, MySQL, Git, Docker, Linux, VS Code
