EDUCATION

JK Lakshmipat University <i>B.Tech in Computer Science, CGPA: 8.00</i>	Jaipur, India Aug 2023 – Present
Seedling Modern High School <i>CBSE Class XII: 78.8%</i>	Jaipur, India 2023

EXPERIENCE

LNMIIT Jaipur <i>Research Intern</i>	May 2025 – Jul 2025 Jaipur, India
– Built a YOLOv5-based object detection pipeline on FLIR RGB-Thermal datasets for low-visibility environments, improving detection accuracy over single-modality baselines – Automated preprocessing and annotation alignment in PyTorch, reducing dataset preparation time by 60% – Designed an RGB-thermal fusion model for real-time multimodal inference in surveillance and autonomous driving applications	

PROJECTS

MeetCut - AI Meeting Intelligence Platform <i>React, Node.js, MongoDB, OpenAI, Groq</i>	Jan 2026 – Apr 2026
– Built an AI-powered meeting intelligence platform that converts recordings into summaries, action items, and FAQs using OpenAI Whisper and Groq Llama 3.3-70B with 95% processing accuracy – Architected a full-stack system with React, Node.js, MongoDB Atlas, and Recall.ai integration for Zoom, Google Meet, and Teams automation – Automated the complete workflow from transcription to PDF/email delivery, reducing meeting follow-up effort by 4+ minutes per session – Integrated JWT authentication, HMAC webhook security, and real-time status polling for secure AI-driven operations	
Emergency Route Finder <i>Flask, Folium, Graph Algorithms</i>	Feb 2025 – Mar 2025
– Developed a Flask-based emergency routing system using Dijkstra’s Algorithm and Kruskal’s MST to identify optimal ambulance routes and nearby hospitals – Visualized traffic-aware routes, ETA, and hospital locations through interactive Folium maps, improving simulated response time by 35% – Designed scalable graph utilities and REST APIs to support future real-time GPS and multi-vehicle dispatch integration	
Blockchain Land Registry (Web3 DApp) <i>Solidity, Hardhat, React, ethers.js, IPFS, Polygon</i>	Mar 2026 – Apr 2026
– Engineered a decentralized land registry platform using Ethereum smart contracts to maintain immutable and fraud-resistant property records – Implemented 6 modular smart contracts with role-based access control for registration, ownership transfer, dispute handling, and verification – Developed a secure atomic buy-sell mechanism with refund handling and ReentrancyGuard-based protection against smart contract attacks – Integrated IPFS storage and a React + ethers.js frontend with MetaMask support, achieving 100% test coverage across 70+ Hardhat test cases	

TECHNICAL SKILLS

Languages: C++, Python, C, JavaScript
Frameworks: React.js, Node.js, Flask, PyTorch, Scikit-learn, Folium
Database: MongoDB, MySQL
Data Tools: Pandas, NumPy, Matplotlib
Tools: Git, GitHub, VS Code, Linux, Docker

ACHIEVEMENTS

Awarded **75% Academic Scholarship** by JK Lakshmipat University for academic excellence
